Dimensions:

The terminals 1, 3, 5 and 6 as well as the terminals 2 and 4 are bridged at the delivery status. (The device runs in cooling mode after creating the supply voltage.) To use the device for cooling and for heating, a suitable controller is necessary. Remove both bridges and connect the terminals 1 and 2 to the controller input. Connect the controller output to the terminals 3 to 6 according to the table beside. Terminals: WAGO 260 series, spring-type terminal 0,5 .. 1,5 mm².
